SUMMARY

Full-stack developer with **technical ownership** of production AI SaaS — LLM agents, RAG, multi-provider LLM gateway, and LLM cost observability. Stack: TypeScript / React / Next.js / Supabase / Postgres, serverless on Vercel. Drive architectural decisions with formal research and ADRs, owning features from design to deploy. Strict TDD, open to fully remote international positions.

TECHNICAL STACK

Languages:	TypeScript, JavaScript, PHP, SQL
Frontend:	React 18, Next.js (App Router), Vite, Tailwind, shadcn/ui, TanStack Query, React Hook Form + Zod
Backend:	Node.js, Deno (Edge Functions), Laravel, Drizzle ORM, Inngest, REST/OpenAPI, Supabase
Database / AI:	PostgreSQL, Row-Level Security, pgvector + hybrid RAG (BM25 + vector), Cohere Rerank, Vercel AI SDK + AI Gateway, Langfuse, embeddings, Ragas + LLM-as-judge
DevOps & Testing:	GitHub Actions (CI/CD with SAST and eval gates), Docker, Vercel, Sentry, Vitest, Testing Library, Playwright

EXPERIENCE

Meteora Digital — Full-Stack Developer

March 2026 — Present • Hybrid

The company's AI platforms: **O Agente** (conversational agents serving paying customers via WhatsApp/Instagram/Web) and an **internal no-code AI agent platform**, used daily by the team.

- Drive end-to-end development of an **AI agent platform with multi-tenant architecture** (template catalog, cron scheduling, durable job execution with Inngest, no-code chat) — Next.js, Vercel, Supabase/Postgres with forced RLS, Drizzle ORM.
- Implemented **stateful agents in internal production use**: scheduled check-in loop, persisted state, interaction via Slack (webhook + durable events) and WhatsApp, with a dry-run simulation mode.
- Integrated **SaaS apps (Gmail, Slack, WhatsApp) with per-user OAuth** via a 1,000+ connector platform, with double-layer cross-tenant isolation (filtered queries + defensive assertions).
- Built a **cross-application LLM observability and cost hub** (Langfuse): per-model/per-app cost, traces, error rates, and an AI capability catalog across 3 instrumented systems, with ports/adapters for provider portability.
- Maintain a **RAG pipeline** (pgvector, hybrid BM25 + vector search, Cohere reranking) and **WhatsApp** integration with a vision pipeline and human takeover on O Agente, on a unified multi-provider LLM gateway.
- Disciplined engineering: **TDD with 1,200+ tests** (unit, integration, Playwright E2E, contract), CI with SAST and RLS lint gates, **40+ ADRs**, and formal stack research with quantified trade-offs.

RioHacks Soluções e Tecnologias — Full-Stack Developer

May 2025 — January 2026 • Hybrid

Solo developer on **Gui360** — a clinic management system — from requirements gathering to deployment: full-stack TypeScript / React + REST API over a relational database, working directly with the client on all product decisions.

EDUCATION

Federal University of Western Pará (UFOPA) — B.Sc. in Computer Science • 2022 — Ongoing
