SUMMARY

Full-stack developer with **technical ownership** of production SaaS and AI applications: TypeScript, React/Next.js, Node.js and PostgreSQL. Work on AI agents, RAG and SaaS integrations, from design to deployment, with automated tests, CI security checks and documented architectural decisions.

TECHNICAL STACK

Languages: TypeScript, JavaScript, SQL
Frontend: React 19, Next.js 16 (App Router), Vite, Tailwind, shadcn/ui, TanStack Query, React Hook Form + Zod
Backend: Node.js, Supabase, Drizzle ORM, event-driven and durable jobs (Inngest), REST/OpenAPI
Database / AI: PostgreSQL, Row-Level Security, AI agents, hybrid RAG (pgvector, BM25 + vector, reranking), multi-provider LLM gateway, LLM observability and cost tracking, LLM-as-judge evaluation
Security & DevOps: data privacy and sensitivity classification, GitHub Actions (CI/CD with SAST and eval gates), Docker, Vercel, Sentry, Vitest, Testing Library, Playwright

EXPERIENCE

Meteora Digital — Full-Stack Developer

March 2026 — Present • Hybrid

AI platforms for the agency and its clients: an **AI-first knowledge brain for a real-estate developer**, in production, an **internal no-code AI agent platform** and **O Agente** (conversational agents that served paying customers via WhatsApp/Instagram/Web).

- Work on an **AI-first knowledge brain for a real-estate developer, in production**: ingestion from 8 sources (WhatsApp, transcribed and diarized meetings, Drive, ERP, time tracking), **RAG over 180k+ chunks**, and natural-language answers with traceable sources and per-role clearance.
- Drive end-to-end development of an **AI agent platform with multi-tenant architecture** (templates, cron scheduling, durable jobs with Inngest, no-code chat) and stateful agents with persisted state and a dry-run mode — Next.js, Vercel, Supabase/Postgres with forced RLS, Drizzle ORM.
- Integrated **SaaS apps (Gmail, Slack, WhatsApp) with per-user OAuth**, with double-layer cross-tenant isolation, encrypted tokens (AES-256-GCM), and per-datum sensitivity classification.
- Built a **cross-application LLM observability and cost hub** (Langfuse): per-model/per-app cost, traces, error rates, and an AI capability catalog across 3 instrumented systems.
- Maintained a **RAG pipeline** (pgvector, hybrid BM25 + vector search, reranking) and **WhatsApp** integration with a vision pipeline and human takeover, on a unified multi-provider LLM gateway.
- Disciplined engineering: **TDD with project suites of 11,000+ tests** (unit, integration, Playwright E2E, contract), CI with SAST and RLS lint gates, **40+ ADRs**, and formal stack research with quantified trade-offs.

RioHacks Soluções e Tecnologias — Full-Stack Developer

May 2025 — January 2026 • Hybrid

Solo developer on **Gui360**, a clinic management system: from requirements to deployment, full-stack TypeScript / React + REST API over a relational database, deciding product directly with the client.

EDUCATION

Federal University of Western Pará (UFOPA) — B.Sc. in Computer Science • 2022 — Ongoing

LANGUAGES

Portuguese Native • English Advanced (SENAC — Basic to Advanced 1, 2019–2021)
